Vidalista 20mg is a prescription medication used to treat erectile dysfunction (ED) in adult men. It contains tadalafil, which helps improve blood flow to the penis during sexual stimulation, supporting firmer and longer-lasting erections. Known for its extended duration of action, Vidalista 20mg may remain effective for up to 36 hours, offering greater flexibility for intimacy. It should be taken only as directed by a healthcare professional and is not intended for use without sexual arousal or by individuals for whom tadalafil is not medically appropriate.
