Soma 500mg (carisoprodol) is a prescription muscle relaxant used for short-term relief of acute, painful musculoskeletal conditions, such as muscle strains, sprains, and other injuries involving muscle spasms. It is generally used alongside rest, physical therapy, and other supportive measures. Soma is not intended to treat chronic pain, nerve pain, arthritis, or long-term pain conditions. Because carisoprodol can cause drowsiness, dizziness, and dependence, it should be used only as prescribed by a qualified healthcare professional.
